Maintain A Normal Life During Power Outages

Things to Consider Before You Buy

Totally Automatic

Carrier specializes in creating a customized home comfort system tailored to your needs with a broad selection of residential heating and cooling products. And, Carrier's Automatic Home Standby Generator can help maintain your comfort and a relatively normal life during power outages by supplying a totally automatic backup power source to your home. Your Carrier dealer can help you choose the best system for your home.

- With Carrier's Automatic Home Standby Generator, you can live a relatively normal life even during extended power outages.
- The Automatic Home Standby Generator can keep your heating and cooling system up and running while also supplying power to lights, furnaces, air conditioners, refrigerators, sump pumps, well pumps, computers and more.
- You don't have to do a thing! This system automatically senses loss of electricity and restores power to the selected circuits in about 30 seconds.
- This generator is more convenient and more powerful than portable generators which typically supply power to just a few extension cords.

Quiet, Safe and Convenient

When your power is out, the last thing you're worried about is how much noise your generator is making. At the same time, it's nice to know that you can enjoy unlimited backup power that's quieter than portable generators, lawn mowers and even some hair dryers.

- Portable generators are not only loud and inconvenient, they could use up to 400 gallons of gas during a two-week outage. A power loss at the gas station will make refilling the portable units difficult if not impossible.
- You can count on safe, reliable power as well, because the Carrier Automatic Home Standby Generator is UL 2200 listed.

Comparative Sound Ratings (decibels)

Technology

- 1 2-cylinder, 30 horsepower engine runs on natural or LP gas for lasting operation even during the longest outage.
- 2 Totally automatic operation means the generator starts itself and automatically begins supplying power to selected circuits.
- 3 The Ultra Quiet Mode runs once a week for 12 minutes at 59 dB to keep the engine lubricated and to let you know the system is working properly.
- 4 Transfer switch and emergency load center senses loss of power to the home, starts the generator, and transfers the generator power to the selected circuits. Generator power is automatically shut off when main power is restored.
- 5 Sturdy, attractive cabinet is factory mounted to a composite base pad. It's insulated to minimize sound, louvered to vent exhaust and coated with a tough powder painted finish. The cabinet is available in steel or aluminum.

Warranty

The Carrier Automatic Home Standby Generator is backed with a two-year limited parts and labor warranty. Ask your Carrier dealer for details.

Turn to the Experts

Willis Carrier invented air conditioning in 1902. Over 100 years later, we're proud to say Carrier systems are trusted in more homes than any other brand.

Carrier continues to be on the forefront of innovative engineering and unsurpassed standards of excellence. So when choosing a home comfort system, you'll want to turn to the experts. Your Carrier dealer will evaluate your home, such as window placement and size, ductwork, other structural specifics and lifestyle to provide a customized indoor comfort plan designed specifically for you. And when you have an expert helping you make an educated decision, you're going to feel more comfortable.
